

Paper Bridge Challenge

Time: 30 minutes

You need

- ☐ 2 books or boxes of the same height
- ☐ Several sheets of paper
- ☐ Tape
- ☐ Coins or paper clips to use as weights

Steps

- 1** Place the two books 20 cm apart.
- 2** Lay one flat sheet across the gap and add coins one by one until it bends. Count them.
- 3** Fold a new sheet into pleats, like a fan, and test it the same way.
- 4** Try a rolled tube or a different shape.
- 5** Write down how many coins each design held.

Before you start: what do I think will happen?

My observations

Table 1. Bridge test results

Bridge design	My prediction (coins)	Coins it held	What happened when it bent
Flat sheet			
Fan-folded sheet			
Rolled tube			
My own design			

Think about it

Which shape was strongest? Why do you think so?

Where do real bridges use this idea?
